

# VARO E-com Packer

## Pack up to 1,800 units per hour

The VARO E-com Packer is a compact high capacity packing machine that can automatically pack varying items into ready-to-ship packages. It can pack 900 to 1800 units per hour in protective packaging in customized package size and without the use of box filling / void fill.

## Reduce staff costs up to 80%

The packaging process is fully automatic, and you only need one operator to refill cardboard etc.

According to our customers, they have saved up to 80% of their staff costs by going from a manual packaging process to automation with the VARO E-com Packer.

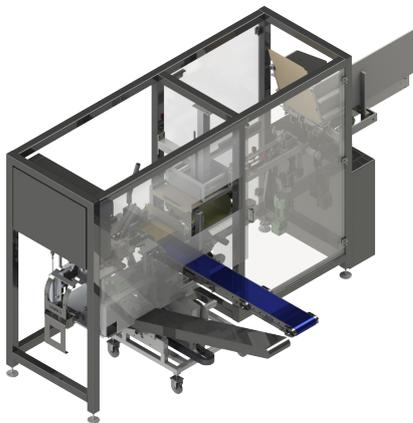

## Order fulfillment company saves 50% on packaging material

"Before we invested in VARO's packaging machine, our goods were packed manually in one cardboard box. We packed 60 small packages per hour per employee. Today, we can pack approx. 300 boxes per hour per employee - and the carton wrapping is half the price of our previously used box. Personnel costs have been reduced by 80%, and the packaging material is approx. 50% cheaper than before. In addition, the machine was also integrated into our automatic production flow."

Heiko Weissflog, DBK Denmark  
longtime customer and user of three VARO E-com Packers

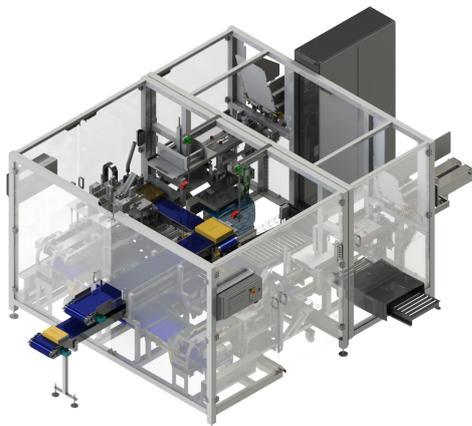

### A packaging machine for all needs

The VARO E-com Packer is available in two compact sizes, which can be adapted to most needs, to ensure the most efficient packaging process that really makes a difference.

#### VARO E-com Packer 900

- compact design - footprint 2.7 x 4.1 meters
- one lane
- can pack up to 900 ready-to-ship packages / hour (technical performance)
- one cover size
- can apply two labels
- can handle both single items, multiple items, variable items with or without Fold2Protect inner box

#### VARO E-com Packer 1800

- compact design - footprint 3.2 x 4.7 meters
- two lanes
- can pack up to 1,800 ready-to-ship packages / hour (technical performance)
- two cover sizes
- can apply two labels
- can handle both single items, multiple items, variable items with or without Fold2Protect inner box

## Perfect match for automated storage systems

Whichever model, the VARO E-com Packer is the fastest and most flexible packaging machine in the industry and a perfect match for automated storage systems.

## Protective wrapping

The packaging machine folds corrugated cardboard around the products and glues the top and sides so that the products are protected and secured in the packaging.

## Versatile packaging option - Fold2Protect

For further optimization of the packaging process, VARO, together with a packaging specialist, has invented Fold2Protect, an inner box also made of 100% corrugated cardboard, which can be packed directly into the machine as part of the package.

Fold2Protect is optional and particularly suitable for the packing of very light or fragile items.

## Sustainable packaging solution

The VARO E-com Packer is an environmentally friendly packaging solution, as corrugated cardboard contains a high proportion of recycled materials, such as discarded cardboard boxes or old newspapers. Your corrugated cardboard packaging will also be fully recyclable after use.

Consequently, you will be able to provide your customers with environmentally friendly, protective and plastic-free packaging without air cushions or other filling materials.
