

# CRAB SYSTEM

## Improve Efficiency with Automatic Roll Delivery

Quickly transport rolls without forklifts or foundation work

The PARA CRAB<sup>®</sup> system automatically takes rolls from the storage area and transports them to the single facer. Operating with just a standard floor track, a single CRAB<sup>®</sup> system can fully automate the roll transportation needs of most plants, improving efficiency while mitigating the risks of manual operation.

*Only sold and serviced through SUN in the UK, Ireland, US, Canada and Mexico.*

### No hydraulics or pits

Improve operator safety with a standard floor track

### Reduce Downtime

Flexible track design allows for standard clamp truck operation during maintenance

### Seamless Integration

Fully automate the process from roll stock to corrugator

# CRAB SYSTEM

## Customizable programming to fit any operation

The CRAB® System optimizes the delivery of rolls to the corrugator by clamping the roll, lifting it up off the ground, pulling it back in, and then walking down the track and delivering it to the single facer. It is fully integrated with a plant's existing ERP, so corrugated manufacturers don't need to make any major structural changes to reap the benefits of the system. It can work in conjunction with PARA's Vertical Roll Storage System, or with rolls delivered via a standard clamp truck.

### Loading/Unloading

- Automatic
- Dual-sided

### Crab® Claw

- Equipped with anti-roll wedges

### Floor Track

- Minimal excavation work needed
- Improved safety due to reduced forklift traffic
